**General Comments:** Water caused numerous problems for the timing system. This included water in the plugs, water in the wires, and moisture in the timing box. It caused both phantom strikes and strikes not to be properly saved. Fewer problems occurred as the day dried out. The most serious problem was the system stopping in one of the races. Several times were improperly allocated (see

footnotes). This will be addressed in the new timing system that will have a “pass” button to resolve riders crossing the same tape switch at nearly the same time.

Footnotes:

- <sup>1</sup> (1K) – During the Oestreich/Rowe race the timing failed. The splits are recorded to that point.
- <sup>2</sup> (2K) – Wicker/Rudy. The splits were not properly allocated for Rudy at 2K. He should have had 178.193, and the his last time should have been in the Wicker split.
- <sup>3</sup> (2k) – Bailie/Colette. They did not complete the requisite laps due to a mistake of the lap counters. Their approximate finish was adjusted based on their lap times to when they finished.
- <sup>4</sup> (3K) – Fuller-Muller/Burgess. This was another case where the algorithm incorrectly assigned a time (the finish time for Fuller-Muller). It should have been 258.07, and that finish time shown for Fuller-Muller should be exchanged with the correct Fuller-Muller finish time listed at 2839 m in the Burgess splits.
